This second edition serves that purpose also but goes beyond into applications of classical mechanics proper. The reader is assumed to have some proficiency in math analysis-implicit function theorem for example-enough to follow a proof say when you look it up. In the second edition, Goldstein corrected all the errors that had been pointed out, added a new chapter on perturbation theory, a new section on Bertrand's theorem, and another on Noether's theorem. Other arguments and proofs were simplified and supplemented. Before the death of its primary author in 2005, a new (third) edition of the book was released, with the collaboration of Charles P. Poole and John L. Safko from the University of South Carolina.
