Low-Level Programming - C, Assembly, and Program Execution ...

A low-level programming language is a programming language that provides little or no abstraction from a computer's instruction set architecture—commands or functions in the language map closely to processor instructions. Generally, this refers to either machine code or assembly language.Because of the low (hence the word) abstraction between the language and machine language, low-level ...

Low-Level Programming: C, Assembly, and Program Execution ...

In computer programming, assembly language (or assembler language), often abbreviated asm, is any low-level programming language in which there is a very strong correspondence between the instructions in the language and the architecture's machine code instructions. Because assembly depends on the machine code instructions, every assembly language is designed for exactly one specific computer ...
